Sleeping Respiratory Rate Log

Client	Name:	Patient Name:				
Case	#: Date:					
can de evider waiting	buld like you to monitor your pet's sleeping respiretermine if your pet's heart disease is resulting in the proof of the p	fluid build-up in his/her lungs (Is having when the heart failure is mild rather than				
How to	calculate your pet's sleeping respiratory (breath	ning) rate:				
1.	Your pet should be sound asleep in a cool (normal room temperature) place before counting. Make sure you count when the pet is not "dreaming".					
2.		the number of times your pet's chest moves in and out (in and out together counts as one of over a period of 1 minute on a clock or watch.				
3.	Record the number of breaths per minute in the	e "SRR" (Sleeping Respiratory Rate) column				
	ogs: Normal is less than 25. Call us if it is 30 or gore than 50.	greater. Your pet needs to see a veterinarian ASAP if				
	ats: Normal is less than 30-40. Call us if it is 40 once than 50.	or greater. Your pet needs to see a veterinarian today				
Please monitor your pet's sleeping respiratory rate times per day/week.						

Please bring this sheet with you for your pet's next check-up.
